

FAST-SETTING GLASS IONOMER RESTORATIVE MATERIAL

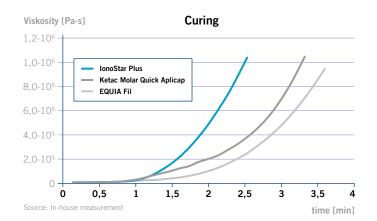

FLOWABLE - AND YET PACKABLE

IonoStar Plus is a glass ionomer restorative material with numerous special features. Very easy to extract from the capsule, the material at first has excellent wetting characteristics resulting in optimal marginal adaptation. Its viscosity then changes within a few seconds, making the material malleable for at least one minute without sticking. It thus provides ideal viscosity at every stage of application.

Moreover, IonoStar Plus has a curing time of just two minutes, after which work can continue immediately. This is a valuable advantage, particularly in the treatment of patients with low compliance, such as children.

The diagram shows the curing behaviour of the tested materials, measured by rheometer at 37 °C mouth temperature. Thanks to its initial, low-viscosity, consistency IonoStar adheres perfectly to the cavity walls. It then sets rapidly, resulting in only a short wait before the finishing process can begin.

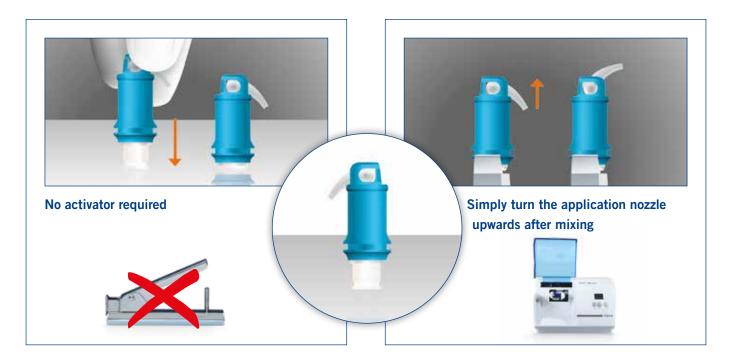

IonoStar Plus is the first glass ionomer material to possess the fluorescence of a natural tooth, perfecting the naturally aesthetic appearance. This fluorescence makes the material excellently suitable for anterior restorations, which have exactly these aesthetic requirements.

Clinical case 1

IN THE NEW APPLICATION CAPSULE

Thanks to VOCO's new application capsule, application is simple, practical and no longer requires the use of an activator device. The capsule is simply placed on a firm surface (e.g. a table) and pushed down by hand to slide the white flask containing the liquid into the powder chamber. This combines the powder and the liquid and is followed by conventional mixing using a capsule mixer. The application nozzle is then turned upwards, and the capsule is immediately ready for use once placed in any commercially available applicator.

Clinical case 2

FAST-SETTING GLASS IONOMER RESTORATIVE MATERIAL

Indications

Restorations of non occlusion-bearing class I cavities

Semi-permanent restorations of class I and II cavities

Restorations of cervical lesions, class V cavities, root caries

Restorations of class III cavities

Restoration of deciduous teeth (permanent)

Base / liner

Core build-up

Temporary restorations

Extended fissure sealing

Advantages

- Perfect marginal adaptation and packability in one product, thanks to a change in viscosity during application
- Fast setting time of only 2 minutes from placement of the filling
- The first glass ionomer material with tooth-like fluorescence
- High level of fluoride release
- The new capsule design reaches smaller cavities and difficult-to access areas of the mouth
- High compressive strength and abrasion resistance
