RELINING MATERIALS WITH MORE THAN 10 YEARS OF CLINICAL SUCCESS

Direct hard relining material in an automix cartridge for total and partial dentures, denture repairs as well as lengthening of denture rims

A-silicone based permanent soft denture relining material

Presentation

Ufi Gel SC

REF 2041 kit – cartridge 50 ml Ufi Gel SC, adhesive 10 ml, each 10 ml glazing base/catalyst, mixing tips type 8, accessories

REF 2040 refill – cartridge 50 ml, mixing tips type 8

REF 2029 refill 10 ml Ufi Gel SC adhesive

REF 2047 refill each 10 ml glazing base/catalyst

REF 2187 refill 50 mixing tips type 8 (pink)

Trimming disk:

REF 2049 refill trimming disk, 10 pieces

Ufi hard C

REF 2215 kit – cartridge 80 g, adhesive 10 ml, mixing tips type 8

REF 2218 intro kit – cartridge 80 g, dispenser type 2, adhesive 10 ml, mixing tips type 8

REF 2216 refill – cartridge 80 g, mixing tips type 8

REF 2217 refill 10 ml adhesive

REF 2187 refill 50 mixing tips type 8 (pink)

Ufi Gel SC
PERMANENTLY SOFT RELINING IN ONE APPOINTMENT
Ufi Gel SC

CHAIRSIDE RELINES THAT ARE FAST, RELIABLE AND EFFECTIVE

Indications

Ufi Gel SC is indicated for denture patients with insufficient fit or adhesion of the denture, flabby ridge, pressure spots, mucosa- and jaw inflammation, new adaptation of dentures etc. It can be used on almost all cold-curing denture materials.

Advantages at a glance

- Complete relining chairside in one appointment
- Extremely high adhesion with special adhesive
- Biocompatible (no methacrylates), neutral in taste and odor
- Color-stable and esthetic, with chameleon effect

Ufi Gel SC – a speciality material

The adhesive (patent pending) provides extremely good connection between the relining and the denture. The adhesive has to act on the denture only 60 seconds before the relining material can be applied.

Ufi Gel SC is an A-silicone with a low shore-A hardness and remains permanently soft. Masticatory forces are well absorbed and distributed over a large area.

Ufi Gel SC is biocompatible and does not release any plasticizers or monomers, etc. after curing. The material does not discolor, remains permanently neutral in taste and is easy to clean.

Ufi Gel SC is light-pink and transparent. This produces a natural shade adaptation of the relining material to the denture (chameleon effect). Even on older dentures Ufi Gel SC adapts optimally in shade.

The adhesive, the material properties of the A-silicone and the application from the cartridge allows for the relining of a denture in one session.

EXPANSIBILITY

U. Welker et al., Comparative material study of a soft synthetic material, clinic of Friedrich-Schiller-University Jena, March 1998.
